ABSTRACT
Undeniable role of ICT is considered in all aspects of political, social and economic communities of the central principles of sustainable development. Mobile Internet with computers that have caused the kind of education it is interpreted as e-learning. Unfortunately in our country and most countries in the world, the most traditional and most backward is agricultural society. Most of them either did not attend or have abandoned the child. The need for continuing education among segments of society, producing one of the basic needs of our lives is more important than other people. On the other hand, due to existing constraints, various training opportunities for them are less. One of the best options for solving this problem is the use of e-Learning. In this paper, the effect of computers on life especially in the agricultural and the definitions of e-learning, the advantages and disadvantages of this training and also finally, the necessity and use of e-learning in e-learning applications in agriculture and agriculture are discussed.
Keywords: ICT, e-learning, agriculture
